

PRESS RELEASE

Klaus Multiparking at the BAU 2011: Hall B3, stand 303

Fantastic doors from Klaus: New "Trendvario" design

Top parking system supplier upgrades showcase product –
50 solutions in all types, materials and colors

Aitrach/Munich (jm).

Fantastic doors at the right point in time: Klaus Multiparking GmbH, located in Aitrach (Baden-Württemberg), has pepped up their highly flexible "Trendvario" parking system with new door systems. Approximately 50 individual models in various materials and colors are possible. For example made of glass, wood or aluminum, in colors light ivory, ruby red or pigeon blue. In open or closed designs – there is something for every taste and every house front. During the BAU trade fair in Munich (17th to 22nd of January, 2011), the top international supplier of innovative parking systems will introduce their flexible gate solutions to the public for the first time at stand 303 in hall B3.

"We now have a gate system that is well-suited to all demands. The new gates are practical and distinct, and are easy to install or exchange. The functional and beautiful

PRESS RELEASE

gates are a real highlight," says Thomas Baumgärtel, sales manager at Klaus Multiparking GmbH.

The gate frame is an extruded aluminum construction with a vertical center stay bar. A well-formed recessed grip ensures that the manually operated gates can be opened comfortably. A rubber lip is used to finish the closing edge to the building.

And the gate panels are available in different materials. The innovative Trendvario parking system is now even available behind glass panels – laminated safety glass to be precise. "Previously we didn't have glass gates in our product range. We are of course especially proud of this," explains sales director Baumgärtel enthusiastically. There are also many alternatives to glass: For example gates made of impregnated Nordic spruce. The standard package already includes very attractive looking perforated steel plate panels. Aluminum door panels are also a possibility. The anodized aluminum plates - either perforated or smooth - are more than just an alternative to galvanized perforated steel plates. "Aluminum is much more optically pleasing than steel. Corrosion protection is of course also much better because aluminum doesn't rust," states Klaus sales director Baumgärtel.

With the innovative gate solutions from Klaus Multiparking, damage caused by vehicle impacts can be quickly and easily repaired: Panels and segments can now be exchanged. "In

PRESS RELEASE

the past, this was not possible because the panels were welded to the gate frame. If a panel was damaged, the entire gate could no longer be used," states Baumgärtel with satisfaction regarding the new solution.

Something house owners will also be happy about: The gates can now be perfectly matched to the front of the building. From light ivory to ruby red, from moss green to anthracite gray, from sepia brown to white aluminum – a total of 12 color options are offered by Klaus Multiparking for beautifying the outside of the gates (as seen from the front of the building). The decision is much easier on the inside: the inside of the gate is generally colored light gray.

With the new design, the top supplier of parking systems also conceptually upgraded the Trendvario system, which Klaus Multiparking has made even more innovative: This was possible by combining the Trendvario 4000 system with the Trendvario 4100 and the Trendvario 4300 systems. The result: This saves space in the driving lane.

In addition to variable options and chic gate systems, the Trendvario system can be equipped with the new "EasyWalk" platform profile. The parking systems also have improved operability. A transponder replaces the coded key that was previously used. Multiple languages can be stored in the user interface display panel – English and German are standard. In addition, the user is shown the respective

vehicle specifications regarding size and weight. Baumgärtel states with satisfaction: "We've optimized a very innovative existing system and made it more beautiful and well-rounded – our customers will be thrilled."

About Klaus Multiparking GmbH:

Klaus Multiparking GmbH, located in Aitrach (Baden-Württemberg), is a leading supplier of vehicle parking systems. Klaus provides innovative solutions for dependent and independent parking, for example the double parker, duplex parker and stack parker. The company is well-known mainly for its Multivario multiparkers, Trendvario parking automats and various automatic parkers, which allow space-saving parking as shelf, tower or surface systems. Singlevario single platform systems, Varioparker systems and various underground systems are also included in the product line. All Multiparking solutions have been manufactured exclusively in Germany for nearly 50 years according to the highest quality standards. The company employs 122 workers in the production plant in Aitrach. The company has already received awards for its innovative ideas such as the Multivario parking system - most recently in 2005 with the Baden-Württemberg innovations award. The history of Klaus Multiparking GmbH goes back to 1907 when Klaus was founded as a wheelwright's shop in Bad Tölz
